Consent Tox

☐ I acknowledge the following Safety Information
NeuroModulator (NM) Safety Information The following important safety information is being provided to you so you are aware of the possible side effects from the injection of NM. This information is not intended to scare you or to deter you from being injected with NM but instead it is to allow you to make an informed decision on the injection(s) of NM. IMPORTANT SAFETY INFORMATION: Botox/Dysport/Xeomin may cause serious side effects that can be life threatening. Call your doctor or get medical help right away if you have any of these problems after treatment with NM ? Problems swallowing, speaking, or breathing. These problems can happen hours to weeks after injection of NM usually because the muscles that you use to breathe and swallow can become weak after the injection. Death can happen as a complication if you have severe problems with swallowing or breathing after treatment with NM ? Spread of toxin effects. In some cases, the effect of NM may effect areas of the body away from the injection site and cause symptoms of a serious condition called botulism. The symptoms of botulism include: loss of strength and muscle weakness all over the body, double vision, blurred vision and drooping eyelids, hoarseness or change or loss of voice (dysphonia), trouble saying words clearly (dysathria), loss of bladder control, trouble breathing, trouble sswallowing. These symptoms can happen hours to weeks after you receive an injection of NM. THERE HAS NOT BEEN A CONFIRMED SERIOUS CASE OF SPREAD OF TOXIN EFFECT AWAY FROM THE INJECTION SITE WHEN NM HAD BEEN USED AT THE RECOMMENDED DOSE TO TREAT SEVERE UNDERARM SWEATING, BLEPHAROSPASM, OR STRABISMUS, OR WHEN NM HAS BEEN USED AT THE RECOMMENDED DOSE TO TREAT FROWN LINES. Other side effects of NM include: dry mouth, discomfort or pain at the injection site, tiredness, headache, neck pain, and eye problems: double vision, blurred vision, decreased eyesight, drooping eyelids, swelling of your eyelids and dry eyes. Symptoms of an allergic reaction to Neuromodulator may include: itching, rash, red itchy welts, wheezing, asthma symptoms, or dizziness or feeling faint.

Modern Aesthetics utilizes FDA Approved Neuromodulators (NM) such as Botox/Jeuveau/Daxxify/Dysport/Xeomin therapy for wrinkles is an injection treatment designed to reduce facial expression lines by enabling the muscles to relax. Modern Aesthetics may utilize these FDA Approved Neuromodulators in ?Off-label' areas as chosen by treating Physician. On the face/neck, these NM therapy works best for "dynamic" lines and wrinkles, and is less effective for fine textural changes on the skin surface and for those lines present at rest after a single treatment, however repeated treatments may relieve some of these static lines. Consult with Physician to discuss this more. NM therapy for underarm sweating ("hyperhydrosis") is an injection treatment in the axilla causing the sweat glands to cease working in the injected area. NM therapy is temporary, meaning it will have to be repeated on a regular basis to remain effective. An average response is 2 - 6 months of diminished muscle contraction (or underarm sweating if treated there). After a NM injection, the effect gradually begins over several days and full effect may not be seen until 10 days post injection.

Contraindications For This Treatment Include:

Pregnant or lactating women .Clients with allergies to human albumin (small risk of viral transmission from human albumin used in Type A to provide a larger particle) Infection, inflammation, (including acne), or dermatitis of areas to be injected Fever, flu, or cold symptoms Facial asymmetry such as Bell's Palsy Clients with neurologic disorders including: Amyotrophic Lateral Sclerosis (Lou Gherig's Disease), Myasthenia Gravis, Lambert Eaton Disorder, Multiple Sclerosis, Parkinson's disease

I am aware of the following information affecting my treatment and risks including but not limited to:

For at least 2-4 hours after injection, remain in an upright position, do not vigorously rub or massage the treated area. Antibiotics may potentiate the effects of NM. Clients taking medications that interfere with neuromuscular transmission may have a potentiated effect. Thick sebaceous skin may have very deep wrinkles making them a poor candidate. A natural eyelid ptosis may be more susceptible to drooping of the eyelid. NM does not diffuse over scar tissue (the appearance of scar tissue may change following injection of NM into neighboring wrinkles). Alcoholic beverages, herbal supplements, Blood thinning medications 24 hours prior to NM. Stressful events (surgery, divorce, intense exercise etc) may alter metabolism of NM and reduce duration and/or effect. Unknown risks

I am aware of the following risks:

Mild to moderate discomfort or pain. Many patients describe the sensation as a pin-prick. Redness or swelling of the skin at the injection site, usually lasting only a few hours. Bruising in the treated area that may last for several days to several weeks after injections. In rare cases a bruise may last for longer periods of time. Asymmetry or imperfect results after a single treatment. Unknown risks.

Though rare, I am aware the following may also be considered a risk:

Temporary eyebrow or eyelid drooping and/or double vision may occur if the NM affects the muscles which move the eye and eyelid. Temporary lip ptosis (drooping) if NM is used around the mouth area. Transient muscle twitching in the treated area. Transient headache. Infection. Whenever the skin barrier is penetrated infection is possible. Should any type of skin infection occur antibiotics may be necessary.

I understand that full effects of the treatment may take up to 10 days following the treatment and that if my level of correction is not as I had hoped, I may need to purchase additional NM for injection to reach a higher level of correction. I agree to communicate with my practitioner within two weeks (14 days) for evaluation and/or additional correction. I acknowledge that due to my unique skin composition, there are no guarantees, warranties, or assurances that I will be satisfied with my results. I understand that Modern Aesthetics does not offer perfection as

a realistic treatment goal. I understand that this treatment may involve risks of complication from both known and unknown causes, and I freely assume those risks. Prior to receiving treatment, I have been candid in revealing any condition that may have a bearing on this procedure. I consent and authorize a staff member of my practitioner, who has been trained in NM therapy, to perform NM injections on me. I agree to pay for this treatment and for any care required thereafter, whether at Modern Aesthetics or elsewhere. I understand that I have the right to refuse or stop treatment at any time, but that no refunds will be provided once payment is made (including and even if I am dissatisfied with my results). I certify that I have read this entire informed consent and that I understand and agree to the information provided in this form as well as the information provided in the Pre/Post Care form. I agree to have my photograph taken to document my condition. My practitioner has explained the nature of my condition, the nature of the procedure, alternative treatments, and the benefits to be reasonably expected compared with alternative approaches. This document is a written confirmation of this discussion. I agree that this consent supersedes any previous verbal or written disclosures. This consent is valid for all of my NM injections in the future as well at Modern Aesthetics.

Post Care:

- For the first 2-4 hours following NeuroModulator, remain upright, do not lie down flat or bend over.
- It may take up to 10 days for NeuroModulator to take full effect.
- Do not participate in activities that include heavy lifting, vigorous exercise or straining for the rest of the day.
- Do not rub or manipulate the injection site.
- Avoid applying retinol or glycolic to the skin until next day.
- Make-up may be applied gently before leaving the office, remember to wipe up and away from your eyes or brows.
- Bruising is rare when injections are given by Dr. Anwar. However, for the less than 2% of the time that we see this, we offer Arnica tablets and ointment to help reduce bruising if this does happen.
- A follow-up visit at 10 days to 2 weeks is suggested to assess results for subsequent treatments, particularly if you are a first time client. If full correction is not achieved, you will need to purchase addition NeuroModulator for injection.
- Re-treatment is typically recommended every 4 months. After the first year of receiving NeuroModulator this might be every 4-6 months.
- Although rare, infection in the injection area is possible. Signs of infection may include redness and tenderness in the infected area and fever. Should you develop an infection, antibiotics may be necessary. Please contact us should you have any concerns.
- Avoid herbal supplements such as Ginko, green tea, and NSAID's like Ibuprofen, Aleve, Asprin (If your Doctor approves) for the day following treatment to limit bruising
- If any serious concerns to notify Office and 911 as needed

BY SIGNING BELOW, I ACKNOWLEDGE AND CERTIFY THAT I HAVE READ AND UNDERSTAND THE "CONSENT, RELEASE AND INDEMNITY AGREEMENT" FOR THIS PROCEDURE, AND THAT I AM SIGNING IT VOLUNTARILY.
